

ABSTRACT

A flame-retarding thermoplastic resin composition which is composed essentially of

- (A) a component of thermoplastic resin,
- (B) a component of nitrogen atom-containing phosphatic compound,
- (C) a component of hydroxyl group-containing compound or partly esterified product thereof and
- (D) a component of neutralizer for acids,

with optional component (E) of triazine derivative or (F) of metal alkoxide, wherein the proportion of each component is such that the component (A) is in the range from 60 to 90 parts by weight, the sum of the components (B)+(C) is in the range from 10 to 40 parts by weight and the component (D) is in the range from 0.1 to 5 parts by weight, per 100 parts by weight of the total sum of (A)+(B)+(C), respectively, wherein the weight ratio of (B)/(C) amounts to at least 1.
